

HEALTHY HINTS

Complex Carbs

Simple Carbs

Every day we use tons of **energy**, but where does all of that energy come from?

CARBOHYDRATES!

These can be found in bread, crackers, pasta and rice. The healthiest **complex carbohydrates** keep all of their good nutrition, unlike simple carbohydrates.

So next time you are making yourself and PB&J sandwich – choose **wheat** bread instead of white!

This week we learned about: **Carbohydrates**

- Carbohydrates, or *carbs*, are the body's main source of **energy**. There are 2 types:
 - **Simple** carbohydrates: single sugar molecules found in refined sugar (candy, junk food, etc.), milk, and fruit.
 - a. Milk and fruit are healthier choices than refined sugars because they also come with fiber and other great nutrients
 - **Complex** carbohydrates: “starches” that are found in grain products such as bread, crackers, and pasta.
 - a. Whole grain options are healthier choices, and we will learn why next time!
- Nutrition labels can help us know how many carbohydrates are in the food we buy!
 - If the “Dietary Fiber” line is **3 grams** or more – that is healthy!

NEXT TIME (11/22/19): Whole Grains!
